1. Comment. Compared with the status of the preceding month, there were the following changes:

- The number of standard gauge locomotives decreased by four units which were withdrawn from the park of deactivated locomotives. The number of serviceable locomotives has been slightly increased resulting from a decrease of the number of locomotives under repair.
- The number of narrow gauge locomotives increased by three units, probably new equipment.
- The number of electric locomotives and gasoline engine small locomotives was unchanged.

2. Comment. As compared with the status of the preceding month, the number of freight cars increased by 410 units. Most of these cars were gondola cars (+ 177) and boxcars (+ 200). This increase is possibly not the result of new production only. The possibility of errors in enumeration should be taken into consideration.

3. Comment. The number of passenger cars increased by four units (2 express train coaches and 2 sleeping cars), probably new equipment. There was a difference between the number of fast train cars and the number of passenger train cars as compared with the preceding month. This difference probably resulted from a compensation of these two types of cars (- 60 fast train cars and + 60 passenger train cars). The number of other passenger cars remained constant.
